Resume

I've managed as Software Development Leader the following projects:

2003 - **Web surfer system for Monte Titoli, a company of the Italian Stock Exchange Group**: this is a messaging system that allow the trusted communication beetwen MT and all their customers, based on the Open Text Livelink application system.

2002 - **E-docs system for Enelpower, the engineering company of the Enel Group**, the Italian Electrical Comapany: this is a document management system web based integrated with SAP R/3 and made on the top of Open Text livelink.

2001 - **WeBIt for for Borsa Italiana, the main company of the Italian Stock Exchange Group**: this is the intranet of the Italian Stock Exchange group that integrates a document management system (handles all the incoming/outcoming/internal documents) and a workflow management system (handles all the internal procedures).

2001 - **NIS system for Borsa Italiana, the main company of the Italian Stock Exchange Group**: this is a messaging system that allow the trusted communication among Borsa, all their customers (quoted companies) and all the major european press agencies, based on the Open Text Livelink application system and Backweb push technology.

I'm the chief engineer for

- **the eLearning system named "Livelink for Learning Management"**, a Learning Management System integrated with Livelink: Livelink for Learning Management delivers a comprehensive system for training management. It allows organizations to provide a virtual classroom and collaborative environment with the advantages of a Web-based training experience. It capitalizes on Livelink's secure, Web-based central repository and document management functionality to enable instructors to transfer content, review assignments online, and test for comprehension. The instructor and the class collaborate in a virtual classroom, sharing information through discussion groups and chat rooms. Livelink News Channels are used to broadcast course information. Students and instructors can manage the learning environment to suit their schedules independently. Employees can be trained anytime, anywhere, and at their own pace.

- **the skills & competencies management system named "livelink for Skills Management"**: Livelink for Skills Management provides the ability to catalog, maintain, and assess levels of expertise possessed by employees. It allows an organization to determine where knowledge required to meet business objectives already exists within the organization, so that it can be leveraged to solve business problems. It identifies where shortfalls exist and training is required to enhance knowledge to meet the requirements of the organization. The ability to do effective recruiting by analyzing gaps and identifying the requirements for talent is enhanced, effectively targeting recruitment strategies specifically to the needs of the organization. Failure to quickly identify competencies required to meet business objectives is costly to an organization.
